status in preservation. Smaller in size, but equal in the hearts of railway enthusiasts, are the tank engines that formed the backbone of shunting and branch-line steam.

In response to customer requests ModelWorks are relaunching the GWR '14xx Class' tank locomotive which represents for many the very

allowing you to spread the cost and the workload. The production batch is limited and we are not planning a further run so you will need to hurry to secure your model. Production commenced in July 2003 and you are advised to order soon - previous locomotive batches have sold out quickly.
