

New Release from ModelWorks

The Burrell Cub Agricultural Traction Engine in 2" Scale

**Managable
2" Scale**

Our 4" Scale Burrell Agricultural Traction Engine has been a huge success. So for those who would love to build a smaller, easier to transport model we have decided to launch this fabulous 2" scale version. This model will provide you with a continual source of satisfaction over its 24 month build and you can add your own personal touch by painting it in your choice of livery.

Each kit comes complete with full assembly instructions, drawings and isometrics to make everything as clear and as straightforward as possible. With a little hand finishing you'll find your kit goes together with the minimum of fuss.

Like the 4" version this is a limited production run model and you are advised to order promptly as many of our recent models have simply sold out causing much disappointment to

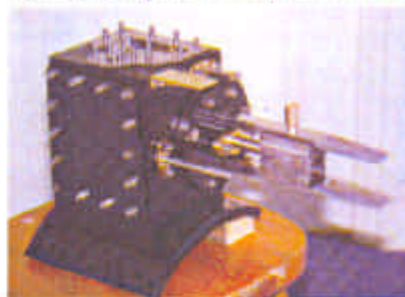

those who waited

The Burrell in fully machined kit form is only available from ModelWorks International (Sales) Limited. Even if you have the necessary workshop facilities a similar model built traditionally from castings would probably take even an experienced model engineer thousands of hours to complete over many years of elapsed time. Our model will take around 250 hours (plus time to paint) and you can be steaming soon after the arrival of your final kit. The ModelWorks kit not only represents fantastic value, it is a fabulous investment great fun and is your route to guaranteed success. Opportunities to acquire such a model are rare and if you were planning to build an agricultural traction engine then you couldn't make a better choice than the Burrell.
